Homework for Advanced Concepts in R

Robert L. Bray

2023-06-21

- Please do all of the following *before* the first class.
- Join the class' slack channel.
- Follow the instructions in this video to download R, download RStudio, and open the following slide decks: slides_tibble.Rmd, slides_quartet.Rmd, and slides_judges.Rmd.

  - For another R installation demo, see here.
  - You will need the tidyverse, learnr, and knitr packages to run this file. To install these packages, write `install.packages("tidyverse")`, `install.packages("learnr")`, and `install.packages("knitr")` in the console.
  - If you get an error installing some R packages, enter `update.packages()` in the Console and then try again. If you still have problems, try turning off Global Protect, Northwestern's firewall software.
  - If you get `ERROR: "there is no package called 'tzdb'"` then write `install.packages("tzdb")` in the console and try again.
  - DM me over Slack if you can't get these slide decks up and running.

- Watch this video to learn the basics of RStudio.
- Download the course textbook here, and read through page 41. This content corresponds to the slides_tibble.Rmd slide deck. Work through this slide deck on your own if you haven't yet mastered this material.
